SUMMARY

Computer Science student specializing in AI and Cybersecurity. Experienced in developing Generative AI solutions, RAG architectures, and scalable backends using Python and FastAPI. Passionate about solving complex problems through LLMs, machine learning, and automation.

EDUCATION AND CERTIFICATION

BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE (CYBERSECURITY)

(2022 - Present)

Kalasalingam Academy of Research and Education

HIGHER SECONDARY EDUCATION

(2015- 2022)

Jawahar Navodaya Vidyalaya Ongole

APPLIED AI MASTERY

[LINK](#)

Infoziant's Edutech

TECHNICAL SKILLS

- **Programming Languages:** Python, TypeScript, JavaScript
- **AI/Machine Learning:** Convolutional Neural Networks (CNN), Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Vector Databases, LIME
- **Web Frameworks & APIs:** FastAPI, Streamlit, React, Node.js
- **Libraries & Tools:** Pandas, Pydantic, HTTPX, Docker, Jupyter

PROJECTS

AUTOMATED RESUME BUILDER POWERED BY LOCAL LLMS (OLLAMA)

[LINK](#)

- Developed a microservices-based application utilizing FastAPI for the backend engine and Streamlit for the client and admin portals.
- Implemented local Large Language Model integration via Ollama to automate resume generation securely, achieving an average inference time of [Insert metric, e.g., 2.5 seconds] per section.
- Engineered secure user authentication using bcrypt and structured API data validation with Pydantic.
- Containerized the multi-tier application using Docker and orchestrated the deployment lifecycle with Docker Compose.

BRAIN TUMOUR PREDICTION USING CONVOLUTIONAL NEURAL NETWORKS

[LINK](#)

- Trained and evaluated a Convolutional Neural Network (CNN) for medical image classification, deploying the final architecture as an .h5 model.
- Structured data preprocessing, exploratory analysis, and model training workflows within Jupyter Notebooks.
- Integrated Local Interpretable Model-Agnostic Explanations (LIME) to visualize and validate the model's diagnostic reasoning and feature importance.
- Evaluated model performance and convergence using Matplotlib loss/accuracy visualizations to identify overfitting and establish baselines for future hyperparameter tuning.

MEDCONNECT: AI-POWERED HEALTHCARE ASSISTANT

[LINK](#)

- Engineered an AI chatbot workflow utilizing Python and Jupyter Notebooks to process and route healthcare-related queries.
- Implemented a Retrieval-Augmented Generation (RAG) architecture by integrating a local vector database, managing binary index files for efficient and context-aware medical data retrieval.
- Developed the application's foundational frontend utilizing React and TypeScript to interact with the underlying AI models

RUBRICS FEEDBACK ASSISTANT

[LINK](#)

- Built an interactive educational evaluation tool featuring modular routing for dedicated faculty and student portals using Python and Streamlit.

ACHIVEMENTS

1ST RUNNERUP IN INNOVATRON (NATIONAL LEVEL HACKATHON) IN KARUNYA UNIVERSITY

we had developed a Healthcare Coordination & Telemedicine Platform by using the React, Nodejs, and supabase and we had written a RAG architecture for Telemedicine and Disease prediction)

1ST RUNNERUP IN INTELLICOUTURE (INTER LEVEL HACKATHON ON GEN AI)

we had developed an application which uses AI to evaluate the answers according to the rubrics assigned by the faculty and it suggest the student to update his answer to match the rubrics
